# Coastal Helps Shallowbrook Keep Their Horses Dry and Healthy

## Why Spray Foam Insulation?

When you want to save the most energy in your building, use spray foam insulation. It can lower your monthly heating/cooling costs by up to 50 percent, and it's a "greener" option than traditional forms of insulation – it's usually soy-based and made of natural agricultural byproducts.

## What's Your Situation?

If you're facing a problem that needs a solution from the people that know insulation best, contact Coastal.

From new construction homes to the complex specialty projects we're famous for, Coastal is ready to get to work on your building with a team of engineers that manufactures and installs your spray foam insulation. Our expertise gives you the best product, the best service, and peace of mind that everything is being done right.

To get started on your custom project plan, call 800-535-0028 or visit [coastalinsulationcorp.com/contact](http://coastalinsulationcorp.com/contact)

No matter what type of project you need insulated, you have important priorities that don't change: getting your insulation done on time, on budget, and with quality that will last. It's easy to promise these things, but Coastal actually follows through, with specific solutions for every part of your job that's important to you.

Here's one of our favorite success stories of how Coastal answered the call with our innovative insulation solutions, solving a very serious situation for one of our customers.

## The Problem:

Coastal was contracted to insulate a 7,000 sq. ft. ceiling of an equestrian center's barn in Somers, CT. The unheated structure was covered by a metal roof with no insulation. Condensation formed on the inside of the uninsulated roof, causing a buildup of moisture that had nowhere to go...except down. The moisture fell constantly like rain on the horses and people working in the barn – hardly ideal conditions! Due to the condensation, the barn's sheetrock was decaying and wet and the ceilings were starting to collapse. Without proper insulation, this problem was quickly becoming dangerous and costly.

## The Solution:

Our Spray Foam Engineers installed 2" of closed cell foam to the underside of the entire roof. To ensure the safety of the structure, the team also installed a thermal barrier coating over the insulation.

## The Result:

Coastal was able to eradicate condensation issues, leaving a dry and safe place for both animals and workers at this large equestrian center. The ecstatic owner exclaimed that Coastal's Innovative Insulation Specialists are "the guys to have!"

## Who Else Uses Coastal?

*"I was really pleased with the service at Coastal. My Insulation Specialist was very knowledgeable about the different applications of spray foam, and the work was completed promptly and efficiently. I look forward to working with them again on my next project."* - Glen Micks, Project Manager
